Syllabus for the post of Lecturer in Mechanical Engineering

Applied Mechanics and Design

Mechanics of Materials: Stress and strain, elastic constants, Poisson's ratio; Mohr's circle for plane stress and plane strain; thin cylinders; shear force and bending moment diagrams; bending and shear stresses; concept of shear centre; deflection of beams; torsion of circular shafts; Euler's theory of columns; energy methods; thermal stresses; strain gauges and rosettes; testing of materials with universal testing machine; testing of hardness and impact strength.

Theory of Machines: Displacement, velocity and acceleration analysis of plane mechanisms; dynamic analysis of linkages; cams; gears and gear trains; flywheels and governors; balancing of reciprocating and rotating masses; gyroscope.

Machine Design: Design for static and dynamic loading; failure theories; fatigue strength and the S-N diagram; principles of the design of machine elements such as bolted, riveted and welded joints; shafts, gears, rolling and sliding contact bearings, brakes and clutches, springs.

Fluid Mechanics and Thermal Sciences

Fluid Mechanics: Fluid properties; fluid statics, forces on submerged bodies, stability of floating bodies; control-volume analysis of mass, momentum and energy; fluid acceleration; differential equations of continuity and momentum; Bernoulli's equation; dimensional analysis; viscous flow of incompressible fluids, boundary layer, elementary turbulent flow, flow through pipes, head losses in pipes, bends and fittings; basics of compressible fluid flow.

Heat-Transfer: Modes of heat transfer; one dimensional heat conduction, resistance concept and electrical analogy, heat transfer through fins; unsteady heat conduction, lumped parameter system, Heisler's charts; thermal boundary layer, dimensionless parameters in free and forced convective heat transfer, heat transfer correlations for flow over flat plates and through pipes, effect of turbulence; heat exchanger performance, LMTD and NTU methods; radiative heat transfer, Stefan-Boltzmann law, Wien's displacement law, black and grey surfaces, view factors, radiation network analysis

Thermodynamics: Thermodynamic systems and processes; properties of pure substances, behavior of ideal and real gases; zeroth and first laws of thermodynamics, calculation of work and heat in various processes; second law of thermodynamics; thermodynamic property charts and tables, availability and irreversibility; thermodynamic relations.

Applications: *Power Engineering*: Air and gas compressors; vapour and gas power cycles, concepts of regeneration and reheat. *I.C. Engines*: Air-standard Otto, Diesel and dual cycles. *Refrigeration and air-conditioning*: Vapour and gas refrigeration and heat pump cycles; properties of moist air, psychrometric chart, basic psychrometric processes. *Turbomachinery*: Impulse and reaction principles, velocity diagrams, Pelton-wheel, Francis and Kaplan turbines; steam and gas turbines.

Materials, Manufacturing and Industrial Engineering

Engineering Materials: Structure and properties of engineering materials, phase diagrams, heat treatment, stress-strain diagrams for engineering materials.

Casting, Forming and Joining Processes: Different types of castings, design of patterns, moulds and cores; solidification and cooling; riser and gating design. Plastic deformation and yield criteria; fundamentals of hot and cold working processes; load estimation for bulk (forging, rolling, extrusion, drawing) and sheet (shearing, deep drawing, bending) metal forming processes; principles of powder metallurgy. Principles of welding, brazing, soldering and adhesive bonding.

Machining and Machine Tool Operations: Mechanics of machining; basic machine tools; single and multi-point cutting tools, tool geometry and materials, tool life and wear; economics of machining; principles of non-traditional machining processes; principles of work holding, jigs and fixtures; abrasive machining processes; NC/CNC machines and CNC programming.

Metrology and Inspection: Limits, fits and tolerances; linear and angular measurements; comparators; interferometry; form and finish measurement; alignment and testing methods; tolerance analysis in manufacturing and assembly; concepts of coordinate-measuring machine (CMM).

Computer Integrated Manufacturing: Basic concepts of CAD/CAM and their integration tools; additive manufacturing.

Production Planning and Control: Forecasting models, aggregate production planning, scheduling, materials requirement planning; lean manufacturing.

Inventory Control: Deterministic models; safety stock inventory control systems.

Leputy Secretary Haryana Public Service Commission Operations Research: Linear programming, simplex method, transportation, assignment, network flow models, simple queuing models, PERT and CPM.

Heat-Trackfor Modes of heat barrefor, one dimensional heat conduction, resistance concept an electrical analogy, heat transfer through finit-protectly heat conduction, turneed parameter system Heatler's charts; thermal boundary leyer, dimensionless parameters in the and forced convector heat transfer, heat bargeter correlations for flow over flat plates and forcing pipes, effect o burbulance, heat exchanger performance. LMTD and NTU methods; redistive heat transfer. Stellar boundarios, heat exchanger performance. LMTD and NTU methods; redistive heat transfer. Stellar analysis

Themooynamics: Themooynamic systems and processes: properties of pure substances, behavior of ideal and real gases; zeroth and first laws of thermooynamics, calculation of work and built in pricess processes, second law of thermodynamics, thermodynamic property charls and tobles, realists and imevershifty, thermodynamic relations.

polications: Prever Engineering: Air and gas compressors: vigour and gas power cyclas, concept Pregeneration and reheat CC. Engines: Air-standard Otto, Diasal and dust cyclas: Retrigoration ed air-conditioning: Vapour and gas retrigoration and heat pump cyclas: properties of motet air systemetric shart, basic psychrometric processes. Turboracchinegr: Incytae and muchor inciples, valodity diagrams, Patton wheel, Frands and Kaplan turbines, steam and gas hubines.

laterials, Manufacturing and Industrial Eccineering

Erolneeting Materials: Structure and properties of engineering minimize, phase diagram treatment, stress strein disptants for engineering materials.

Gesting, Forming and Johning Processes: Different types of call of design of poterna, moulds an solid: solidification and cooling, riser and gating sesting the catometics and visid article functamentals of hot and cold working processes load estimation for bulk (forgano, rolling, excusion draving) and sheet (shearing, deep draving, bending) metal forming processes" (mould a signal motallurary Principles of working, besting, soldering and estimation to bulk (forgano, rolling, excusion motallurary Principles of working, besting, soldering and estimation and particulate si powde
